

# Filtered Showerhead

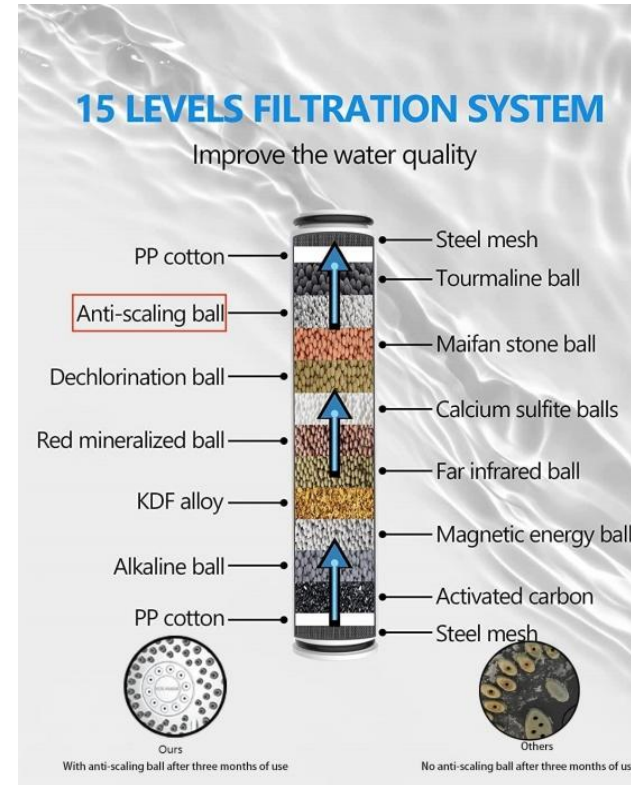

HS588

# Features

# Remove harmful contaminants effectively

Remove harmful contaminants through a 15-level filtration system to improve the water quality. Therefore, this product can effectively remove harmful contaminants such as chlorine and haloacetic acids, as well as drugs. It can achieve the effect of water purification, making the water colorless and tasteless. Our products are durable and still have anti-scaling balls after three months of use.

# Multiple selections of spray modes

---

The shower has three spray modes: rainfall, massage and mix. You can change the spray mode by rotating the shower head. No matter what kind of spray mode, it will wash away your fatigue and make you feel more comfortable.

# Saving time and money with high pressure

---

High-pressure shower is an efficient and environmentally friendly cleaning tool. Using high-pressure shower can make your cleaning work easier and faster, while saving you money.

The high-pressure shower can effectively extend the distance of the water flow and increase the strength of the water flow. While achieving the cleaning effect, it also avoids the phenomenon of wasting water. In addition, the high-pressure shower can also reduce your cleaning time, thus making your life more convenient. In general, the high-pressure shower can help you complete the cleaning work more quickly and efficiently, while also saving your time and money.

# Innovative design

---

The design of this shower is really unique. It not only has a self-cleaning silicone nozzle and adjustable connectors, but also is equipped with a stainless steel hose and three setting controllers, allowing you to easily adjust the mode and intensity of the water.

# Simple installation

---

In addition, the installation of this shower is also very simple and easy. It only takes five minutes to complete the installation by following the three steps shown in the figure.
